

Apple Font Input

Output

Functions in depth

↳ small Block of Code which gets executed only when it is called.

Types of function

Builtin

→ Created by someone

→ we only use

funⁿ call

Modified

→ we create the funⁿ

→ we only use it also

funⁿ defⁿ + funⁿ call

funⁿ defⁿ

Actual Code / Block of Code

funⁿ call

→ Single line of program where we tell our compiler to run our funⁿ defⁿ

4 ways of creating the Machine/function

① Take Input & also give output

↓
parameter

↓
return

takes in parameter & it returns something

② ~~takes~~ takes in no params & it is not going to return anything

③ takes input → but doesnot give any output.

④ No input but gives output

```
def add(a, b):  
    result = a + b  
    return result  
    print("hello")
```

fun body | fun def ²

```
a = int(input("Enter first number: "))  
b = int(input("Enter second number: "))  
ans = add(a, b)  
print(ans)
```

// fun call
